PowerShell Code Generator (PSCodeGen) is a powerful, visual, template-based script authoring tool for use in Microsoft Visual Studio (both Windows and.NET) using the PowerShell scripting language. With PSCodeGen, you can author, compile, run, debug, and deploy

PowerShell scripts, scripts built in any.NET language, and even scripts that are nothing more than a Visual Studio template. The template-based approach to scripting is also convenient for those who want to author their own custom PowerShell modules and templates without having to write the text code by hand. PSCodeGen builds scripts, modules, and templates from a set

of XSLT transformations. The templates can then be customized or created directly from the XSLT transformations. Power. With the introduction of PowerShell 4, now it's available in visual studio too. It offers powerful Visual PowerShell Integrated Development Environment (VSPEI) to write PowerShell scripts, especially when the pipeline is complicated, and Visual Studio Integrated

Scripting Environment (VSSCI) to write any script written in C# or any other.NET language, for example.vbscript. The rest is the same of the c# Code Generator. For example, Code snippets are still available. More information on Visual Studio Code Generator you can find on this link. If you want to add it into Visual Studio, see the walk through on this link. You can install it from the Tools

menu. I need to create a script to open a specific directory and list files and recursively open all folders and files of a particular extension. How can I do it in Visual studio Code generator using the XSLT, I am new to the language and need help on how to perform the coding in the XSLT. I know how to open the files in a project, but I do not know how to achieve this with the XSLT. A: I

assume that you're using a Microsoft developer or node.js IDEs, if yes then you need to install the PowerShell Code Generator from VS Code. You can follow these steps from your VS Code to do this: Search the tool in the Extensions tab Enable PowerShell Code Generator Once you have installed the tool, you will be able to create the XSLT which will help you to transform

your PowerShell scripts into.NET Scripts. I know that you want to transform your PowerShell scripts into.NET Scripts but I am not sure how you
