1. Field of the Invention The present invention relates to a programmable controller with a capability for communication with the external devices, and particularly to a programmable controller with a program memory wherein a corresponding program can be transferred from the programmable controller to the external devices via a network. 2. Description of the Related Art There are programmable controllers with a capability for communication with the external devices connected to it. Conventionally, such a programmable controller is connected to the external devices via a bus line for communication with the external devices. Recently, there are cases where a personal computer communicates with an external device connected to the personal computer in a peer-to-peer manner. In this case, the external device connected to the personal computer must not only be capable of communication with the personal computer, but also must have a program compatible with the personal computer. Therefore, a conventional programmable controller cannot satisfy the above requirement.Q: Is this kind of open connection safe? I have a method that takes two arguments (a String and String). One of those two arguments may be the IP address of a server. If so I create a (String) Object with the String part of the IP address. public static void S2(String str) { // Do stuff. } public static void S(String str) { // Do stuff. } public static void main(String args[]) { try { S2(args[0]); S(args[0]); S2(args[1]); S(args[1]); S2(args[2]); S(args[2]); // And so on. } catch (Exception e) { e.printStackTrace(); } } My question is, is this method safe? Or is this a dangerous way to open a connection to a server? Is it possible that one of the the threads will open two connections at the same time? A: In short: Yes, it is. As System.out.println does check for null or not

For more tips about using the Photoshop Brush and Pen tools, go to the Photoshop Toolbox. Click here to read our article about using Photoshop plugins. Brushes: Layers Load a brush preset In Photoshop, a brush (or pen tool) can be used to create a new layer. Layers add another step in the editing process, allowing you to work on an image without affecting the other layers. 2. Click the Brush tool icon (pen/pencil) on the left toolbar and choose a brush preset. The brush presets in the Brush menu include Fireworks, Noteworthy, and Smiley. 3. Alternatively, you can create a brush and use it to paint. The brush and pen tools are also used to apply effects to an image by "pasting" the selected area to the active layer. In the most simplistic example, you can paint a rectangle on a new layer, then paste a copy of that rectangle onto another layer. 4. You can alter the painting behavior of a layer. The Shapes, Effects, and Inner Effects filters are explained below. Apply an effect to a layer 5. Click the Create New Layer icon (triangle) on the left side toolbar to add a new layer. In the layers palette, you can name the new layer and select what actions to apply to it. 6. You can apply various effects to an image using the Layers panel. The Layers panel is located in the layers palette and contains the following sections: Curves Colorize Shadow Make Changes Use the layer filters 7. Click the small triangle next to the effect type to add filters to the current layer. The different effects are explained below: Curves Use the Curves filter to change the lightness/darkness of an image. 8. You can use the Default Level for background brightness control. You can use this setting as a guide when you take the image back to Lightroom or other similar programs. The Lightening and Darkening sliders allow you to adjust the brightness of the entire image. 9. Click the Left side of the Curves slider to slide to the left, or the Right side of the slider to slide to the right to adjust brightness. Colorize Use the Colorize filter to adjust the color of an image. 10. Click
